IT Security Policy

Sample Company | Training and Demo Document | Version 1.0

Purpose

This policy protects company systems, devices, accounts, and sensitive data.

Password Security

Use strong unique passwords of at least 12 characters. Never share passwords with colleagues or reuse company passwords on personal websites.

Multi-Factor Authentication

Multi-factor authentication (MFA) is required for email, VPN, cloud systems, and other critical business applications.

Phishing Awareness

Do not click suspicious links or open unexpected attachments. Report suspected phishing emails to the IT security team.

Device Protection

Lock your screen when away from your desk. Company laptops must use approved endpoint protection and disk encryption.

Data Handling

Store confidential documents only in approved company systems. Do not copy sensitive data to personal email, USB drives, or unapproved cloud storage.

Security Incident Reporting

Immediately report lost devices, suspicious logins, malware alerts, or accidental data exposure to IT security.
